

Portfolio report

Introduction

The goal in this task is to make a website for myself where I can showcase some of the work I have done and tell a little bit about myself. It took a while before I knew what I wanted it to look like, but I got some ideas after a while. Because I have people close to me who loves taking photograph, I decided I wanted to get some help from them and use a picture of myself. The picture that was taken helped form the rest of the website and is used as a banner for the front page.

Logo

I am still not sure if this is the logo that I want to use, but I decided to not spend as much time on it this time. I like the look of it, but I'm not sure if it is relevant enough as it looks more like a logo for a hair dresser than a website for web designs. It is shaped as my own hairstyle and has my initials in it, which makes it looks like a face.

HTML and CSS

Putting in all the HTML code went fine and worked without any troubles. I wrote the CSS code in between as I was working on the HTML and I had some troubles making the site responsiv, but the mobile version went fine. I did borrow some of the code from my semester project, but changed it a lot so it fits this site.

Projects

The projects I chose to show are the semester project, the re-cycle website, the co-own prototype, a logo design I made for Hertzberg Prod, the Internet timeline and the Rain countdown design we made in the beginning of the year. The reason I chose these is because these are the ones I am most happy with. Most of them are school project, except the logo design who I made on my own free time, for the same guy who took the photo on the front page.

Design

I've been trying to keep the design as simple as possible, and not add too many things in so the site is easier to use.

The fornt page only has one picture and a short text about what the site is about. When you scroll down you see a list of my projects.

In the about page you can see there is some information about me and a picture at the top.

Also the CV page doesn't have much to it other than text which was already written from before since I already had a CV (except some few changes, like adding Noroff to the list).

The contact page contains three boxes. The first box contains my address, phone number and email address. The second contains a form which the user can fill in. This one I had some trouble trying to code as I did not manage to make it look like the one I have in my design. And the third box contains a map of where I live, using google maps.
